

Using the Standard Normal Table

There are two types of standard normal tables. Before attempting to find either the z-score or the probability on the table, make sure you know which table you are using.

z	+0.00	+0.01	+0.02	+0.03	+0.04	+0.05	+0.06
0.0	0.50000	0.50399	0.50798	0.51197	0.51595	0.51994	0.52392
0.1	0.53983	0.54380	0.54776	0.55172	0.55567	0.55966	0.56360
0.2	0.57926	0.58317	0.58706	0.59095	0.59483	0.59871	0.60257
0.3	0.61791	0.62172	0.62552	0.62930	0.63307	0.63683	0.64058
0.4	0.65542	0.65910	0.66276	0.66640	0.67003	0.67364	0.67724
0.5	0.69146	0.69497	0.69847	0.70194	0.70540	0.70884	0.71226
0.6	0.72575	0.72907	0.73237	0.73565	0.73891	0.74215	0.74537

$p(x \leq z)$
 Area from z to the left

The Cumulative Probability Table

Each entry in the cumulative probability table is the probability of a random variable (x) is less than or equal to a specified value (z), which is illustrated in the graph as the shaded area from the value z to the left.

z	+0.00	+0.01	+0.02	+0.03	+0.04	+0.05	+0.06
0.0	0.00000	0.00399	0.00798	0.01197	0.01595	0.01994	0.02392
0.1	0.03983	0.04380	0.04776	0.05172	0.05567	0.05966	0.06360
0.2	0.07926	0.08317	0.08706	0.09095	0.09483	0.09871	0.10257
0.3	0.11791	0.12172	0.12552	0.12930	0.13307	0.13683	0.14058
0.4	0.15542	0.15910	0.16276	0.16640	0.17003	0.17364	0.17724
0.5	0.19146	0.19497	0.19847	0.20194	0.20540	0.20884	0.21226
0.6	0.22575	0.22907	0.23237	0.23565	0.23891	0.24215	0.24537

$p(0 \leq x \leq z)$
 Area between 0 and z

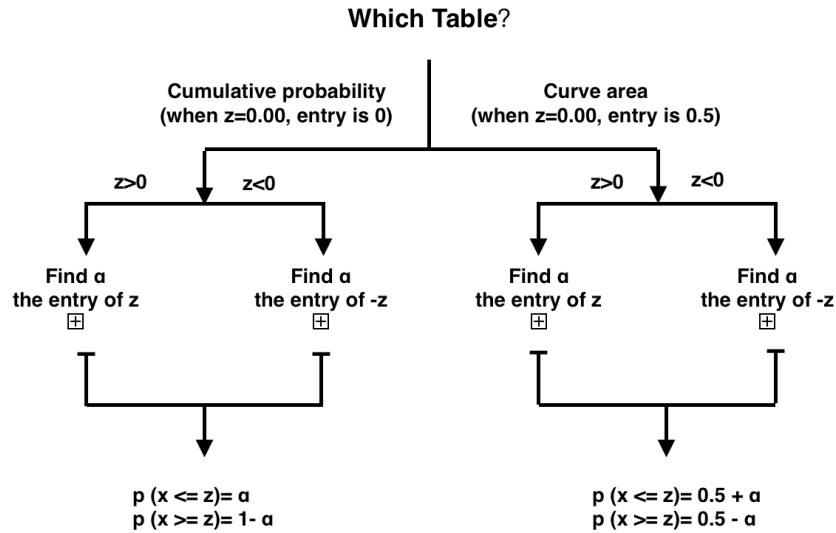

The Normal Curve Area Table

Each entry in the normal curve area table is the probability of a random variable (x) is between 0 and the special value z, which is illustrated in the graph as the shaded area from the 0 to value z.

Using the Standard Normal Table

Steps

Practice

Find the probability given z-score using both tables:

$$P(Z \leq -1) =$$

$$P(Z \leq 1) =$$

--
